History of Present Illness

HPI comments

This is a 50-year-old white male with a history of coronary artery disease, hypertension, diabetes, schizophrenia, who reports the emergency department complaining of left-sided weakness and left arm contractures. Patient is in the local prison and had an episode of hypoglycemia last night. Patient was taken to dispensary given nitroglycerin for chest tightness, and fed. Patient had facial droop and left-sided weakness at that time and was returned to his cell. Patient was not checked on until this afternoon at which point he continued to have left-sided leg weakness and contracture of the left arm. Patient's other symptoms had resolved. Patient came into the emergency department 16 hours after the onset of his symptoms. Patient denies any aggravating/relieving factors. Patient denies trauma.
